

HELP SHAPE VIRTUAL HEALTH CARE IN ONTARIO

Share your experiences with telephone and video appointments, and patient portals in primary care or family practices!

Our study, *Qualitative Examination of Primary Care Patients Experiences with Virtual Care*, invites Ontario residents to participate in focus groups to share their experiences and suggestions on how to improve virtual health care in primary care settings.

As a focus group participant, you will:

- Participate in a 60-to-90-minute focus group where you will join a facilitated discussion on virtual health care.
- Inform patient-centred recommendations to the Ontario government regarding how to provide high quality health care through virtual care appointments.
- Receive an honorarium gift card
